Care and Preservation of **ENDURAWOOD** Countertop

Finished with Bioshield Herbal Oil, Hard Oil and OSMO Poly-X

Endura uses one coat Bioshield Herbal Oil #2, Hard Oil #9 and a final coat of OSMO Poly-X for a non-toxic, low-VOC, durable finish that brings out the color and beauty of our butcher-block counter tops. This finish combination is the best choice for high traffic areas and is easy to maintain.

Regular Care:

- ◆ Keep your counter top free of standing water, dust, hot items and foods that stain.
- ◆ Use a cutting board, trivets, hot pads and spoon rests to avoid direct contact and protect the wood.
- ◆ Wipe wood clean with a non-abrasive damp cloth or sponge using a little soap if necessary
- ◆ We suggest SafeChoice, Super Clean or BioKleen All Purpose Cleaner. They are non-toxic, odor free, dye free and biodegradable cleaners containing no phosphates, ammonia or chlorine bleach that will harm your counter top.
- ◆ Dilute highly concentrated cleaners with water 20:1 before spraying or applying with a damp sponge.
- ◆ Rinse well and dry with a soft clean towel.

Maintenance or repair:

Spot repairs are easy. There's no need to strip the whole countertop or even to remove old Poly-X Oil. For minor repairs, just scuff the damaged area with fine steel wool or a white Teflon sponge coated with OSMO Liquid Wax Cleaner, and buff lightly when the cleaner is dry. If a more extensive fix is needed, apply a new coat of Poly-X Oil. Make repairs regularly, and the finish will last indefinitely.
